**NEW FOR 2008**

## IMPROVED TACTICAL SHARPSHOOTERS RIFLE REST II

(Designed by snipers for snipers / Operationally proven)

### Exciting New Innovation

A reconfiguration of the original Sharpshooters Rifle Rest components has astounded users with its simplicity, accuracy, and the ability to track targets that are elevated, depressed, or a moving combination of both, 360 degrees using a video tripod with a claw ball head.

### The Innovations

- Arm rests become optional (shown here without them).
- Reverse the rifle rests.
- Pinch the weapon in place.
- Loosen the tripods claw ball head lock so the entire rifle rest and weapon can be swiveled as a unit.
- Control the weapon with the strong hand/shoulder and assist the movement using the weak forearm and or hand.
- Smoothly track moving targets in any environment.
- Use for **STANDING** or **SITTING** position hides.

Current owners of the Tactical Sharpshooters Rifle Rest or our Urban Sniping Package can easily try this new and improved configuration without buying any new parts or accessories.

**PLEASE REFER TO AND READ THE COMPLETE SET OF SHARPSHOOTERS RIFLE REST INSTRUCTIONS PRIOR TO USING THIS EQUIPMENT OR THIS NEW CONFIGURATION.**
